SESSION DESCRIPTION:

In Internet of Things (IoT) settings, block chain has shown a large potential to establish trust and agreement systems without the involvement of a third party. This potential has been proved. Artificial intelligence (AI) has also been significantly influenced by machines, which has led to significant automation across many industries. When we talk about "wireless big data," we are referring to the enormous amount of information that is produced, processed, and stored in wireless networks by wireless devices and users. There are certain to be challenges associated with the integration of cloud infrastructure, blockchain technology, the internet of things, machine learning, and big data for smart wireless networks; nevertheless, some of these issues are to be anticipated. In order to facilitate the exchange of ideas and novel approaches among academics, the purpose of this special session is to provide a forum that is interactive.

PUBLICATION AND SUBMISSION PROCEDURE

The conference aims at carrying out double-blind review process. The papers submitted by the authors will be assessed based on their technical suitability, the scope of work, plagiarism, novelty, clarity, completeness, relevance, significance, and research contribution. The conference proceedings will be published in **Springer LNNS Series (Scopus)**.
